Persistence and degradability

Bis(2-ethylhexyl) hydrogen phosphite is subject to biological degradation in the environment(1); however, no specific data were provided(SRC).

Bioaccumulative potential

An estimated BCF of 410 was calculated in fish for bis(2-ethylhexyl) hydrogen phosphite(SRC), using an estimated log Kow of 5.60(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is high(SRC).

Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc of bis(2-ethylhexyl) hydrogen phosphite can be estimated to be 1.2×10^4 (SRC). According to a classification scheme(2), this estimated Koc value suggests that bis(2-ethylhexyl) hydrogen phosphite is expected to be immobile in soil.

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas

scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
